

Defect Report

WorkForcePro — Workforce Management & OJT Platform

Manual Testing & Defect Identification

Project	WorkForcePro Workforce Management & OJT Platform
Document	Defect Report
Test Cycle	Functional Test Cycle 1
Total Defects	6 (1 Critical, 3 High, 2 Medium)
Detection Method	Static analysis / requirement review
Basis	Identified by analysis; pending reproduction against a live build
Date	28 June 2026

1. Document Overview

The issues are presented first as a summary, then in full detail. Status is "Open - pending reproduction" for every item until it can be verified against a running environment.

2. Test Environment

Application	WorkForcePro Web Application v1.4.0 (QA / Staging)
API	WorkForcePro REST API v1
Browser	Google Chrome 126.0 (64-bit)
Operating System	Windows 11 Pro (64-bit)
Database	PostgreSQL 15.3
Test Data	Seeded QA dataset (employees, departments, OJT modules, certifications)

3. Defect Summary

ID	Title	Module	Severity	Priority	Status	Linked Test Case(s)
DEF-001	Email uniqueness is not enforced for case-only or whitespace differences	Employee Management	High	High	Open (unverified)	TC-EMP-014, TC-EMP-015
DEF-002	Completed OJT training is auto-approved, bypassing mandatory supervisor approval	OJT Training	Critical	High	Open (unverified)	TC-OJT-012, TC-OJT-019, TC-OJT-025
DEF-003	Employee can complete a training that was never assigned to them	OJT Training	High	High	Open (unverified)	TC-OJT-029, TC-OJT-030
DEF-004	Certifications expiring in exactly 30 days are excluded from the 30-day expiry report	Certification Management	Medium	Medium	Open (unverified)	TC-CERT-011

DEF-005	Training Due Date accepts past dates with no validation	OJT Training	Medium	Low	Open (unverified)	TC-OJT-009
DEF-006	Duplicate Employee ID is allowed; uniqueness is not enforced	Employee Management	High	Medium	Open (unverified)	TC-EMP-010 , TC-EMP-012

4. Severity & Priority Distribution

By Severity		By Priority	
Critical	1	High	3
High	3	Medium	2
Medium	2	Low	1
Low	0		
Total	6	Total	6

5. Detailed Defect Reports

DEF-001 — Email uniqueness is not enforced for case-only or whitespace differences

Defect ID	DEF-001
Module	Employee Management
Severity	High
Priority	High
Detection Method	Static analysis / review
Status	Open - pending reproduction
Requirement	EMP-002
Linked Test Case(s)	TC-EMP-014, TC-EMP-015
Description	Email uniqueness uses a case-sensitive, untrimmed comparison. Two employees can be created with emails that differ only in letter case or surrounding whitespace,

	producing duplicate identities for one person and undermining EMP-002.
Preconditions	1. An employee exists with email ravi.sharma@workforcepro.com. 2. Log in with HR/Admin privileges.
Steps to Reproduce	1. Add Employee. 2. Enter RAVI.SHARMA@workforcepro.com (or the same email with surroundingspaces). 3. Save.
Expected Result	The record is rejected as a duplicate email; comparison is case-insensitive and trimmed.
Actual Result	The record is created, resulting in two employees sharing the same email in different case/whitespace.

DEF-002 — Completed OJT training is auto-approved, bypassing mandatory supervisor approval

Defect ID	DEF-002
Module	OJT Training
Severity	Critical
Priority	High
Detection Method	Static analysis / review
Status	Open - pending reproduction
Requirement	OJT-003
Linked Test Case(s)	TC-OJT-012, TC-OJT-019, TC-OJT-025 (blocks TC-OJT-015, TC-OJT-020 to TC-OJT-024)
Description	When an employee marks an assigned OJT training as completed, WorkForcePro sets the status directly to "Completed" instead of "Pending Approval". The mandatory supervisor approval step (OJT-003) is skipped, and training is recorded as completed for compliance without any supervisor verification. It also

	blocks the entire approval and rejection workflow because no record ever reaches the approval queue.
Preconditions	1. Module 'Forklift Safety OJT' is 'Assigned' to Ravi Sharma. 2. Log in as Ravi Sharma.
Steps to Reproduce	1. Open My Trainings > the module. 2. Enter a completion date and Mark as Completed. 3. Log in as the supervisor and open Approvals.
Expected Result	Status becomes 'Pending Approval' and the item appears in the supervisor's Approvals queue for an Approve/Reject decision.
Actual Result	Status changes immediately to 'Completed'; the Approvals queue is empty; no approval was requested.

DEF-003 — Employee can complete a training that was never assigned to them

Defect ID	DEF-003
Module	OJT Training
Severity	High
Priority	High
Detection Method	Static analysis / review
Status	Open
Requirement	OJT-004
Linked Test Case(s)	TC-OJT-029, TC-OJT-030

Description	The training completion endpoint accepts a completion request for an OJT module that is not assigned to the requesting employee. The UI hides unassigned modules but the API does not validate assignment ownership, allowing an employee to record completion of training they were never assigned, corrupting compliance data.
Preconditions	1. Module 'Fire Safety OJT' exists but is NOT assigned to Ravi Sharma. 2. Ravi Sharma has a valid session.

Steps to Reproduce	1.As Ravi Sharma, POST to the completion endpoint referencing the unassigned module id. 1.Re-query the employee's training records.
Expected Result	The request is rejected (403/422) stating the training is not assigned; no completion record is created.
Actual Result	The endpoint returns success and a completion record is created for a module that was never assigned.

DEF-004 — Certifications expiring in exactly 30 days are excluded from the 30-day expiry report

Defect ID	DEF-004
Module	Certification Management
Severity	Medium
Priority	Medium
Detection Method	Static analysis / review
Status	New
Requirement	CERT-003
Linked Test Case(s)	TC-CERT-011

Description	The 'expiring within 30 days' report uses a strict less-than comparison (days < 30) rather than inclusive (days <= 30). A certification expiring in exactly 30 days is omitted, so a boundary certification is not surfaced for compliance follow-up - a classic off-by-one boundary defect against CERT-003.
Preconditions	1. An employee holds a certification expiring exactly 30 days from today.
Steps to Reproduce	1. Open the Expiring Certifications report. 2. Apply the 30-day view. 3. Look for the exact-30-day certification.
Expected Result	The certification expiring in exactly 30 days is included (the window is inclusive).

Actual Result	The certification expiring in exactly 30 days is not listed; only 29 days or fewer appear.
----------------------	--

DEF-005 — Training Due Date accepts past dates with no validation

Defect ID	DEF-005
Module	OJT Training
Severity	Medium
Priority	Low
Detection Method	Static analysis / review
Status	New
Requirement	OJT-001
Linked Test Case(s)	TC-OJT-009

Description	When assigning an OJT module, the Due Date field accepts dates in the past with no validation or warning, allowing trainings to be created already overdue and distorting overdue/compliance reporting.
Preconditions	1. Log in as a supervisor. 2. An employee and an active OJT module exist.
Steps to Reproduce	1. OJT > Assign Training. 2. Select the employee and module. 3. Set the Due Date to yesterday. 4. Assign.
Expected Result	The past Due Date is rejected with a validation message; no past-dated assignment is saved.
Actual Result	The assignment is saved with a past Due Date and immediately appears overdue; no validation is shown.

DEF-006 — Duplicate Employee ID is allowed; uniqueness is not enforced

Defect ID	DEF-006
Module	Employee Management

Severity	High
Priority	Medium
Detection Method	Static analysis / review
Status	New
Requirement	EMP-001
Linked Test Case(s)	TC-EMP-010, TC-EMP-012

Description	The Employee ID field is not validated for uniqueness on create or update. Two records can share an Employee ID, creating ambiguous identifiers that break lookups, training assignment and compliance reporting that key on Employee ID.
Preconditions	1. An employee exists with Employee ID EMP-1001. 2. Log in with HR/Admin privileges.
Steps to Reproduce	1. Add Employee (or edit another) using Employee ID EMP-1001. 2. Save.
Expected Result	The system rejects the record with a message that the Employee ID must be unique.
Actual Result	The record is saved, leaving two distinct employees with the same Employee ID.
